

Contract Table — Filter Products by Category

Endpoint Contract

Field	Value
Endpoint	`GET /api/products`
Query Param	`category` (string, optional)
Example	`GET /api/products?category=Hat`
Trigger	User clicks a category chip (e.g. "Hat") on the Frontend
Gatekeeper	If `category` param exists != filter array; else return all
Success Status	`200 OK`
Success Body	JSON array of product objects matching the category
Fail Status	`500 Internal Server Error`
Fail Body	`{ "message": "Unable to load products." }`

Product Object Shape (Package)

Field	Type	Description
`id`	number	Unique product identifier
`name`	string	Product name
`description`	string	Short product description
`category`	string	Product category (e.g. Bouquets)
`price`	number	Price in THB
`image_url`	string	URL to product image
`stock`	number	Available quantity

Gatekeeper Logic

IF category query param is present AND not empty
 ! filter products where product.category === category (case-insensitive)
ELSE
 ! return all products
IF result array is empty
 ! return 200 with empty array []
